

Dump error messages

ONTAP 9

NetApp
June 30, 2023

Table of Contents

- Dump error messages 1
 - Destination volume is read-only 1
 - Destination qtree is read-only 1
 - Dumps temporarily disabled on volume, try again 1
 - NFS labels not recognized 2
 - No files were created 2
 - Restore of the file <file name> failed 2
 - Truncation failed for src inode <inode number>... 2
 - Unable to lock a snapshot needed by dump 3
 - Unable to locate bitmap files 3
 - Volume is temporarily in a transitional state 3

Dump error messages

Destination volume is read-only

- **Message**

`Destination volume is read-only`

- **Cause**

The path to which the restore operation is attempted to is read-only.

- **Corrective action**

Try restoring the data to a different location.

Destination qtree is read-only

- **Message**

`Destination qtree is read-only`

- **Cause**

The qtree to which the restore is attempted to is read-only.

- **Corrective action**

Try restoring the data to a different location.

Dumps temporarily disabled on volume, try again

- **Message**

`Dumps temporarily disabled on volume, try again`

- **Cause**

NDMP dump backup is attempted on a SnapMirror destination volume that is part of either a `snapmirror break` or a `snapmirror resync` operation.

- **Corrective action**

Wait for the `snapmirror break` or `snapmirror resync` operation to finish and then perform the dump operation.

Whenever the state of a SnapMirror destination volume changes from read/write to read-only or from read-only to read/write, you must perform a baseline backup.

NFS labels not recognized

- **Message**

Error: Aborting: dump encountered NFS security labels in the file system

- **Cause**

NFS security labels are supported Beginning with ONTAP 9.9.1 when NFSv4.2 is enabled. However, NFS security labels are not currently recognized by the dump engine. If it encounters any NFS security labels on the files, directories, or any special files in any format of dump, the dump fails.

- **Corrective action**

Verify that no files or directories have NFS security labels.

No files were created

- **Message**

No files were created

- **Cause**

A directory DAR was attempted without enabling the enhanced DAR functionality.

- **Corrective action**

Enable the enhanced DAR functionality and retry the DAR.

Restore of the file <file name> failed

- **Message**

Restore of the file file name failed

- **Cause**

When a DAR (Direct Access Recovery) of a file whose file name is the same as that of a LUN on the destination volume is performed, then the DAR fails.

- **Corrective action**

Retry DAR of the file.

Truncation failed for src inode <inode number>...

- **Message**

Truncation failed for src inode <inode number>. Error <error number>. Skipping inode.

- **Cause**

Inode of a file is deleted when the file is being restored.

- **Corrective action**

Wait for the restore operation on a volume to complete before using that volume.

Unable to lock a snapshot needed by dump

- **Message**

```
Unable to lock a snapshot needed by dump
```

- **Cause**

The Snapshot copy specified for the backup is not available.

- **Corrective action**

Retry the backup with a different Snapshot copy.

Use the `snap list` command to see the list of available Snapshot copies.

Unable to locate bitmap files

- **Message**

```
Unable to locate bitmap files
```

- **Cause**

The bitmap files required for the backup operation might have been deleted. In this case, the backup cannot be restarted.

- **Corrective action**

Perform the backup again.

Volume is temporarily in a transitional state

- **Message**

```
Volume is temporarily in a transitional state
```

- **Cause**

The volume being backed up is temporarily in an unmounted state.

- **Corrective action**

Wait for some time and perform the backup again.
